## SUMMARY

Entry-level web developer using HTML, CSS, JavaScript, PHP, and the MERN stack. Collaborated in teams to develop projects like a Task Manager and Library Management System, focusing on clean UI and backend integration. Actively participated in learning sessions, improved problem-solving skills, and followed industry-standard development practices.

---

## EXPERIENCE

### Web Developer Intern

Ediglobe

February 2024 - March 2024, work from home

- Converted Figma designs into responsive web pages using HTML, CSS, and JavaScript, php ensuring pixel-perfect UI implementation.
- Developed a Task Manager web application with features like adding, updating, and deleting tasks to practice CRUD operations and front-end logic.
- Strengthened development and problem-solving skills through real-world project experience and regular team interactions.
- Actively participated in online learning sessions and workshops to improve technical knowledge and stay updated with industry practices.

---

## PROJECT

### E-commerce

[github.com/jahnavikotra/e-commerce](https://github.com/jahnavikotra/e-commerce)

• April 2025 - April 2025

- Currently building a full-stack E-commerce web application using the MERN stack (MongoDB, Express.js, React.js, Node.js) with a focus on performance and scalability.
- Designing user-friendly interfaces using React.js, with features like product listings, cart management, and user authentication.
- Implementing backend APIs using Express and Node.js, and connecting to MongoDB for managing user data, orders, and product inventories.
- Collaborating in a project-based learning approach, integrating Git for version control and applying real-world development workflows.

### Library management

[github.com/jahnavikotra/Library\\_Management\\_System-main](https://github.com/jahnavikotra/Library_Management_System-main)

- September 2024 - October 2024
- Developed a Library Management System using HTML, CSS for the front end, Java Servlets for backend logic, and MySQL for database operations.
- Implemented core features like book issue/return, user registration, admin login, and real-time book availability tracking.
- Worked collaboratively in a team, dividing modules like frontend design, servlet integration, and database management for efficient development.
- Handled data storage and retrieval using SQL queries, ensuring smooth communication between the user interface and backend server.

### Task Manager

[github.com/jahnavikotra/task-manager](https://github.com/jahnavikotra/task-manager)

• February 2024 - April 2024

- Developed a Task Manager web application using HTML, CSS, and PHP, allowing users to create, update, and delete tasks.
- Implemented backend logic using PHP to handle form submissions, perform CRUD operations, and manage task data dynamically.
- Focused on building a clean, user-friendly interface and improving core web development skills through hands-on project work.
